

## Library research project

Choose a melodic percussion instrument to research.

Find out:

- when the instrument was invented (if known), or how long it has been in use
- who invented it, and the inventor's nationality (if known)
- the styles of music the instrument is used in.

Write a paragraph describing what the instrument looks like and what it is made of.

Write a paragraph describing how sound is produced on the instrument. (What is inside it, how does it work, what does the player have to do to make a sound?)

Include a diagram with the parts labelled.
